

AQ3000

Residential Sprinklers

Description

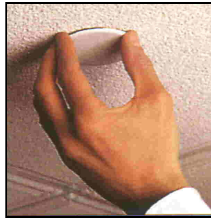

The AQ3000 is a fully automatic residential fire alarm and sprinkler system. Designed primarily for the domestic and residential environment, the concealed sprinklers are small, neat and are completely unobtrusive.

Fully conforms to the BS9251 Standard.

When fitted with the FireGuard electronic control package, the system combines the early warning of smoke alarms, with the effectiveness of modern residential sprinklers.

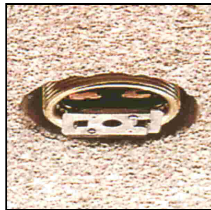

Features

“Virtually undetectable”

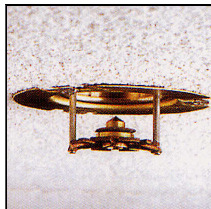

Recessed sprinkler heads are fitted to each room. The pipe work is hidden from view. A small cover plate is fitted to finish.

Operation

In a fire, only the head nearest the heat source will operate. First the cover plate drops away to expose the sprinkler head.

At a slightly higher temperature, the sprinkler head drops, and water is sprayed onto the fire. In many cases only one head will operate to control or extinguish the fire.

Applications

Residential buildings

Domestic residences, Multi-occupancy properties, shops etc

Fact file

Domestic, residential and multi-occupancy buildings. Small commercial premises, shops etc.

Costs

Low/medium
